## **DETAILED ACTION**

### ***Claim Rejections - 35 USC § 112***

1. Claim 2 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. Claim 2 is so narrative that it is unclear as to what steps are being positively recited. Claim 2 recites in the second line, “at least one of” and it is unclear what options are included in the “at least one of.” Claim 2 recites the limitation “a pupil image”. There is insufficient antecedent basis for this limitation in the claim. It is indefinite as to which element’s pupil is being referred to. In addition, the direction “laterally” is indefinite. It is unclear what is “respectively recorded by the detector element.” Is the pupil image or the interferogram respectively recorded? The recitation “in a way correcting the pupil position” is narrative and does not further limit the claim.

2. Claim 3 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. Claim 3 does not define “N”.

### ***Claim Rejections - 35 USC § 102***

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

Art Unit: 2877

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by Goldberg (US 6,307,635).

Goldberg shows a phase-shifting point diffraction interferometer mask designs comprising:

a mask structure (56), and a grating structure (48) , wherein the mask structure comprises one or more one-dimensional mask structure patterns, and the grating structure to be arranged on the image side comprises one or more two-dimensional grating structure patterns, or the mask structure comprises one or more two-dimensional mask structure patterns, and the grating structure comprises one or more one-dimensional grating structure patterns.

5. Claims 2, 4, and 5 are rejected under 35 U.S.C. 102(b) as being anticipated by Goldberg (US 6,239,878)

Goldberg shows wavefront measurement comprising: at least one of moving a phase-shifting structure and a detector element laterally relative to the optical imaging system to be measured and moving an object-side mask structure laterally relative to the detector element (phase-shifting), wherein a pupil image offset (column 6, lines 49+ and column 9, lines 34+) occurring owing to the relative lateral movement is taken into account by back calculating the interferogram, respectively recorded by the detector element, in a way correcting the pupil position, using a phase-shifting characteristic associated with the lateral movement or by a

Art Unit: 2877

computational correction of wavefront derivatives, obtained from the recorded interferograms, in the direction of lateral movement

As to claims 4 and 5, please see figure 1.

***Allowable Subject Matter***

6. Claim 3 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.

7. The following is a statement of reasons for the indication of allowable subject matter: The prior art of record fails to show or to suggest a method of wavefront measurement comprising of all the steps as presently claimed wherein the computational correction of wavefront derivatives is performed using the claimed relationship.
